

PROFESSIONAL SUMMARY

Backend-leaning full stack engineer with 2+ years at Oracle shipping event-driven microservices on Apache Kafka and full-stack Fusion SCM features end to end. Winner, Oracle Gen AI Hackathon (1st of 33 teams); selected for Google Summer of Code 2026 on Kubeflow (CNCF). Strong data structures, algorithms, and system design fundamentals, 600+ problems solved.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, Bash

Back-End: REST API design, FastAPI, Node.js, Express.js, Apache Kafka, microservices, WebSockets, Oracle ADF (Java), concurrency

Front-End: React, Next.js, TypeScript, HTML5, CSS3, Tailwind CSS, ShadCN, ReactFlow, Oracle JET, accessible responsive UI

Databases: PostgreSQL, Oracle Database, MySQL, Elasticsearch, Prisma ORM, Supabase, Firebase

Cloud, DevOps & Testing: Docker, Kubernetes, Helm, Istio, OCI/OKE, GitHub Actions, CI/CD, Prometheus, pytest, unit/integration testing

Fundamentals: Data Structures, Algorithms, OOP, System Design, Distributed Systems, Agile; LangChain, LangGraph, RAG, MCP

PROFESSIONAL EXPERIENCE

Software Engineer

Jun 2024 - Present

Oracle

Bengaluru, India

- Designed an event-driven Alert Notification microservice (Kafka, FastAPI, Oracle DB, Kubernetes/Helm) with at-least-once delivery via idempotency keys, a transactional outbox, and a dead-letter queue.
- Replaced a hand-rolled DB row-leasing queue with Kafka consumer groups, deleting lease/heartbeat code while gaining automatic worker failover; added Prometheus/Alertmanager on-call alerting.
- Delivered full stack features across 3 customer-facing Fusion SCM workflows - Java/Python services, REST APIs, and JavaScript/TypeScript UI, from design review to deployment.
- Built an order-classification service on Oracle ESS batch scheduling processing 10K+ order lines/run, plus a part-matching pipeline that lifted coverage ~30%.
- Reviewed peer code, authored developer documentation, and triaged production defects across service, database, and UI layers.

Open Source Contributor - Kubeflow (CNCF)

May 2026 - Present

Google Summer of Code 2026

Remote

- Selected for GSoC 2026 to evolve kubeflow/docs-agent into a multi-source retrieval service; landed a 5.4K-line merged pull request adding a three-tool MCP server and two ingestion pipelines, reviewed by upstream maintainers.
- Built multi-index retrieval over GitHub issues, source code, and 1K+ Markdown pages into 10K+ indexed chunks; wrote a 71-test suite with CI so ranking regressions fail the build.
- Shipped CI/CD to Kubernetes (OCI/OKE) with Helm/Istio; review contributor PRs and host the project's bi-weekly community call.

Software Engineer Intern - Application Developer

May 2023 - Jul 2023

Oracle

Hyderabad, India

- Implemented Copy Data for lead-time columns in Oracle SCM across back-end service logic and UI, optimizing read/write paths with Elasticsearch queries and PATCH-based REST updates to cut round trips on bulk edits.
- Added linear-regression trend analysis to Oracle JET (JavaScript) charts for supply-chain forecasting views.

PROJECTS

MacBatch - Distributed Batch Compute Scheduler

2026

TypeScript, Python, FastAPI, Node.js CLI, Ollama, Apple Silicon

Source Docs

- Built an open-source distributed job scheduler that fans batch work across a pool of idle machines: a FastAPI control plane models jobs → shards → tasks, and workers acquire 600s leases with automatic reclaim and reassignment on worker failure.
- Designed a pull-based worker protocol so machines behind NAT join with outbound HTTPS only, and published the worker as an npm CLI; benchmarked 252,686 items/hour per node and a 2.8× throughput gain from shard batching alone.

CrackRound - Real-Time Full Stack Interview Platform

2025

Next.js, TypeScript, Node.js, WebSockets, Prisma, PostgreSQL

Website

- Shipped a production full stack web application end to end - React/Next.js front-end, TypeScript API layer, PostgreSQL schema via Prisma, authentication, credit billing, and deployment.
- Engineered a real-time bidirectional WebSocket pipeline (streaming STT → model → streamed audio) at ~1.5s end-to-end latency, with a sandboxed DSA code judge, JSON-schema scoring, and a \$2/session cost ceiling.

EDUCATION

Bachelor of Technology in Mechanical Engineering

2020 - 2024

National Institute of Technology, Warangal

CGPA: 7.34

ACHIEVEMENTS

- Solved 600+ data structures and algorithms problems on LeetCode, GeeksforGeeks, and Codeforces; organized 15+ competitive programming contests.
- Won Oracle Gen AI Hackathon (1st of 33 teams, top 5 of 300+ employees); Runner-up, Tri-NIT Hackathon 2024, Backend track; speaker, Kubeflow Community Showcase 2026.
