

PROFESSIONAL SUMMARY

Full stack engineer with 2+ years at Oracle building **React.js** front-ends and **Node.js/Express** REST services for Fusion SCM Cloud over **PostgreSQL, MySQL, and Oracle DB**. Ships containerized services on **Docker and Kubernetes** with **Prometheus** observability and **CI/CD**, and builds **AI agents, RAG chatbots, and LLM workflows** using **LLM APIs, LangChain/LangGraph, FastAPI, and vector databases**. **Google Summer of Code 2026** contributor to **Kubeflow** (CNCF).

TECHNICAL SKILLS

- Front-End & UI/UX:** React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, ShadCN, ReactFlow, component libraries, state management, responsive design, design systems, WCAG accessibility
- Back-End:** Node.js, Express.js, REST API design, FastAPI, Python, Java, WebSockets, microservices, Apache Kafka, JWT auth, caching
- Databases:** PostgreSQL, MySQL, Oracle Database, Prisma ORM, schema design, indexing, SQL query optimization, Elasticsearch, Supabase
- AI Agents & Workflows:** LLM APIs (GPT-4o, Gemini), RAG chatbots, LangChain, LangGraph, MCP, tool calling, embeddings, FAISS, ChromaDB, Milvus, agent evals
- Cloud & DevOps:** Docker, Kubernetes, Helm, Istio, Prometheus, Alertmanager, GitHub Actions, CI/CD, OCI/OKE, Git, pytest, unit/integration testing, Agile
- Fundamentals:** Data Structures & Algorithms (600+ problems solved), OOP, System Design, Distributed Systems, code review

PROFESSIONAL EXPERIENCE

- Full Stack Engineer

Jun 2024 - Present

Bengaluru, India

Oracle

 - Build the **Oracle Fusion SCM** customer-facing UI with **React.js** as the primary front-end technology across **3 workflows**—catalog lookup, order review, and planner assistance—shipping reusable components, client-side state management, form validation, and responsive layouts.
 - Develop the **REST services in Node.js/Express** behind those screens—resource-oriented endpoints, request validation, pagination, auth middleware, and structured error handling—over **SQL** data access in **Oracle DB**, tuning indexes and joins for **10K+ row** payloads.
 - Collaborate with **UI/UX designers and product managers** in design reviews, giving feedback on wireframes and user flows and implementing them as accessible, responsive screens—including bulk-edit flows that let planners finish multi-step tasks inline.
 - Designed an **event-driven Alert Notification microservice** (**Apache Kafka, Docker, Kubernetes/Helm**) with **at-least-once** delivery, idempotency keys, a transactional outbox, bounded retries, and a dead-letter queue; instrumented it with **Prometheus** metrics (consumer lag, DLQ depth) alerting to Slack via **Alertmanager**.
 - Built **AI agents and workflows** served over **FastAPI** using **LLM APIs, LangChain/LangGraph, embeddings, and vector databases**: a **RAG chatbot** for planner assist (~**40%** less repeated manual investigation), an order-classification agent with rule guardrails and human-review handoff (**10K+ order lines/run**), and a part-matching pipeline (~**30%** coverage lift).
 - Review peer code**, author developer documentation, and triage production defects across UI, service, and database layers.
- Open Source Contributor - Kubeflow (CNCF)

May 2026 - Present

Remote

Google Summer of Code 2026

 - Selected for **GSoC 2026** to evolve kubeflow/docs-agent into a multi-source **RAG chatbot**; landed a **5.4K-line merged pull request** adding a three-tool **MCP server**, embedding service, and two ingestion pipelines.
 - Built **multi-index retrieval** over GitHub issues, source code, Kubernetes manifests, and 1K+ Markdown pages (**10K+ indexed chunks**); wrote a **71-test suite** with **GitHub Actions** CI so ranking regressions fail the build.
 - Shipped **CI/CD to Kubernetes (OCI/OKE)** with **Helm and Istio**, plus **edge rate limiting, CORS, and JWT auth**; review contributor PRs and host the bi-weekly community call.

- Software Engineer Intern - Application Developer

May 2023 - Jul 2023

Hyderabad, India

Oracle

 - Implemented **Copy Data** for lead-time columns in Oracle SCM across service logic and UI, cutting round trips on bulk edits with **Elasticsearch** queries and **PATCH-based REST** updates; added **linear-regression** trend analysis to **JavaScript** charts.

PROJECTS

- CrackRound - Full Stack AI Interview Platform

2025

Website

React, Next.js, TypeScript, Node.js, PostgreSQL, Prisma, WebSockets, GPT-4o

 - Shipped a production **full stack web application** end to end—**React/Next.js** front-end, **Node.js** API layer, **PostgreSQL** schema via **Prisma**, authentication, credit billing, and deployment.
 - Engineered a real-time bidirectional **WebSocket** loop (streaming STT → **GPT-4o LLM API** → streamed audio) at ~**1.5s** end-to-end latency, with a sandboxed **DSA code judge**, **JSON-schema** scoring, and a **\$2/session** cost ceiling.
- MacBatch - Distributed Batch Compute Scheduler

2026

Source Docs

Python, FastAPI, TypeScript, Node.js CLI, Docker, Ollama

 - Built an open-source **distributed job scheduler**: a **FastAPI** control plane models jobs → shards → tasks, workers acquire **600s leases** with automatic reclaim on failure, and a pull-based protocol lets machines behind NAT join over outbound HTTPS only.
 - Published the worker as an **npm CLI**; benchmarked **252,686 items/hour** per node and a **2.8×** throughput gain from shard batching.

EDUCATION

- Bachelor of Technology in Mechanical Engineering

2020 - 2024

CGPA: 7.34

National Institute of Technology, Warangal

ACHIEVEMENTS

- Won **Oracle Gen AI Hackathon** (1st of 33 teams, top 5 of 300+ employees); Runner-up, **Tri-NIT Hackathon 2024**, Backend track; speaker, **Kubeflow Community Showcase 2026**; organized **15+** competitive programming contests.
